Projects

AI-VisDetectAI-VisDetect

With the proliferation of AI models like GPT-3, generating human-like text and images has become remarkably easy. However, this also brings up concerns about misinformation, authenticity, and ethical usage. Our AI-VisDetect and Image Detection project addresses this issue head-on by offering a tool that can help users identify whether the content they encounter was likely generated by an AI model. Played an active role in building the frontend for this project.
